DETAILED ACTION

1. Applicant's amendment dated 10/20, 2004 has been received in application serial number 10/743,202. Applicant's remarks filed 10/29/04, with to the prior office action are persuasive. However, upon further consideration, a new ground(s) of rejection is made.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim18 is rejected under 35 U.S.C. 102(b) as being anticipated by Judet 5,314,485. Judet discloses the invention as currently claimed comprising: Implanting a platform in the radius bone (20, 21); engaging an insert to the platform (23) when the platform is implanted in the radius bone, the insert defining a bearing surface for mating with an articulating element of the metacarpal wrist component (see col. 2, lines 44-49).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3738

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-3, 8-11 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Greenwald et al. 4,106,128. Greenwald et al discloses the invention as claimed comprising: a stem (11) for engagement with a radius bone; a platform (13) attached to the stem; and insert (20) with an articulating surface (22); and a mating feature (23) between the insert and the platform; however Greenwald et al al. does not specify the term "snap-fit". It would have been obvious to one having ordinary skill in the art at the time the invention was made that because Greenwald et al. teaches at col. 6, lines 4-16 that a locking means is described, and that the insert is pushed down into its mating feature its effect and ease of use can be considered as snapping or pushing and is deemed as a design choice as snap fit are well known in the art (see cited references).

Allowable Subject Matter

6. Claims 4-7, 10, 15-17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 12-13 and 20 are allowed.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Goodfellow et al. 4,085,466; Goodfellow et la. 5,871,545; and Insall et al. 6,068,658 and William Ives-Brown GB 2278281 all disclose "snap-fit" arrangements.
